

IN THE CLAIMS:

Please delete the present Claim 13 and replace it with the following:

C1 11/22/22
13. (Once Amended) The device of Claim 1 wherein the support member is adapted to be worn on the head of the person so that alignment beam of light provides an indication of alignment of a line running transversely through the person's eyes.

Please add new Claims 15 through 26 as follow

15. A device for assisting a person in achieving proper alignment of a portion of the person's body in a desired direction when the person is in position to execute a golf stroke, the device comprising:

a support member to be worn by the person upon the person's body;

C2
a light source attached to the support member, the light source being attached to the support member to generate a generally linear, alignment beam of light on a surface visible to the person that is generally parallel to a line passing transversely through the portion of the person's body to provide to the person an indication of the alignment of the portion of the person's body.

16. The device of Claim 15 wherein the support member is adapted to be worn on the head of the person so that alignment beam of light is generally parallel to a line running transversely through the person's eyes.

17. The device of Claim 16 wherein the surface is the ground in front of the person.

18. The device of Claim 16 wherein the golf stroke is a putting stroke.

19. The device of Claim 15 wherein the support member is adapted to be worn in the vicinity of the chest of the person so that alignment beam of light is generally parallel to a line running transversely through the person's chest.

20. The device of Claim 15 wherein the support member is adapted to be worn in the vicinity of the hip of the person so that alignment beam of light is generally parallel to a line running transversely through the person's hip.

21. A method of determining alignment of a portion of a person's body when the person is in position to execute a golf stroke, the method comprising the steps of:

C2
attaching a support member to the person's body, the support member having attached thereto a light source, the light source adapted to generate a generally linear, alignment beam of light on a surface visible to the person to provide to the person an indication of the alignment of a line passing transversely through a portion of the person's body;

generating the generally linear, visible alignment beam of light on the surface.

22. The method of Claim 21 wherein the support member is attached to the head of the person so that alignment beam of light is generally parallel to a line running transversely through the person's eyes.

23. The method of Claim 22 wherein the surface is the ground in front of the person.

24. The method of Claim 22 wherein the golf stroke is a putting stroke.

C2 25. The method of Claim 21 wherein the support member is attached to the person in the vicinity of the chest of the person so that alignment beam of light is generally parallel to a line running transversely through the person's chest.

26. The method of Claim 21 wherein the support member is attached to the person in the vicinity of the hip of the person so that alignment beam of light is generally parallel to a line running transversely through the person's hip.
